Abstract

The algal bibliographic catalogue of the Papahānaumokuākea Marine National Monument (PMNM) is based on previously published records for the 10 northwestern islands, atolls and shoals in the Hawaiian Archipelago, and includes, aligned from northwest to southeast, Kure Atoll (90 species), Midway Atoll (123 species), Pearl & Hermes Atoll (74 species), Lisianski Island including Neva Shoals (52 species), Laysan Island (131 species), Maro Reef (79 species), Gardner Pinnacles (75 species), French Frigate Shoals including La Pérouse Pinnacle (173 species), Necker Island (118 species) and Nihoa Island (33 species). The first section (I. Classification) provides a listing of classes, orders, and families of the 148 genera reported from the PMNM. The second section (II. Species-Reference Index) provides an alphabetized listing of the 335 algal species under the four Phyla, i.e., Cyanobacteria (18 species), Rhodophyta (198 species), Ochrophyta (45 species) and Chlorophyta (74 species) with the applicable reference citations for each island, atoll or shoal. Brief notes are provided, when appropriate, for selected species. The third section (III. Island-Reference Index) provides a chronological listing of all published algal references for each respective island, atoll or shoal. The Reference section contains the complete citation for each reference.

Introduction

The need for an updated bibliographic catalogue of the marine benthic algae for the Papahānaumokuākea Marine National Monument (PMNM) based on current species names associated with each of the 10 northwestern islands, atolls or shoals in the Hawaiian Archipelago seemed warranted with the increase in algal collections over the past decade. The recent algal collections were obtained during the annual Reef Assessment and Monitoring Program (RAMP) cruises to the PMNM by the U.S. National Oceanic and Atmospheric Administration (NOAA) PMNM and by NOAA Pacific Island Fisheries Science Center's Coral Reef Ecosystem Division (PIFSC-CRED) in alternating years. Many algal collections from the PMNM were made which resulted in publications (see Reference section) after the release of the comprehensive Hawaiian algal floras by Abbott (1999) and Abbott & Huisman (2004).

The PMNM algal bibliographic catalogue is patterned after the recently published Central Polynesia algal bibliographic checklist (Tsuda & Walsh 2013) which excluded the Hawaiian Islands and the French Polynesian Islands. The 10 islands, atoll and shoals which are aligned northwest to southeast in the Hawaiian Archipelago encompass an area of 360,000 km² and include Kure Atoll, Midway Atoll, Pearl & Hermes Atoll, Lisianski Island including Neva Shoals, Laysan Island, Maro Reef, Gardner Pinnacles, French Frigate Shoals including La Pérouse Pinnacle, Necker Island and Nihoa Island (Figure 1).

The objectives of this bibliographic catalogue were (1) to provide a listing of marine benthic algae based on past references, thus far, reported from the PMNM utilizing their currently accepted species names, (2) to incorporate all applicable references which reported marine algae from the PMNM in one source, and (3) to identify the specific islands, atolls or shoals where the algae were found. The bibliographic catalogue mainly serves as a convenient tool to access information on what is presently known of marine benthic algae documented from an array of islands, atolls and shoals in the isolated Hawaiian Archipelago in the northern Pacific Ocean. It was not the intent to locate, re-examine and personally verify the identity of the originally cited specimens. Some re-examinations of specimens were conducted in Abbott (1999), Abbott & Huisman (2004) and by the present author when specimens were available in *Herbarium Pacificum* (BISH). A few species names, unless relegated as synonyms or corrected in subsequent publication(s) or here as misapplied names, remain listed as originally cited by the author(s).

Methods

The bibliographic checklist consists of three sections and the Reference section. The first section (I. Classification) provides a listing of the classes, orders (phylogenetic), families (alphabetized) and genera (alphabetized) of those marine benthic algae reported in published works under the Phyla Cyanobacteria (blue-green algae), Rhodophyta (red algae), Ochrophyta (brown algae) and Chlorophyta (green algae).

The second section (II. Species-Reference Index) provides an alphabetized listing of the current algal species names cited in the published references. Synonyms used by the original authors are enclosed in brackets. Intraspecific taxa and species cited by only their generic names are not cited in this listing. AlgaeBase (Guiry & Guiry 2014) was consulted for current names and classification. Citations of author, with or without initials, follow Brummitt & Powell (1992). Species that were newly described on the basis of specimens from the Northwestern Hawaiian Islands are cited in boldface and the specific island where the collections were made is designated as “Type.” Annotations, if deemed necessary, are included under “Note.” The islands, atolls and shoals are arranged from northwest to southeast. Pearl & Hermes Atoll and French Frigate Shoals are abbreviated in this section as P&H and FFS, respectively. In one case where no specific island was designated (see *Halimeda velasquesii*), the reference was cited under the Northwestern Hawaiian Islands (NWHI).

The third section (III. Island-Reference Index) provides a chronological listing of all published citations under the respective island, atoll or shoal. The complete references of all citations in the text are provided in the Reference section.

Note. Belton *et al.* (2014) reinstated the earlier described *Caulerpa chemnitzia* to accommodate *Caulerpa peltata*, *Caulerpa imbricata* G. Murray and three varieties of *Caulerpa racemosa* which were relegated as synonyms.

Caulerpa cupressoides (H. West in Vahl) C. Agardh

FFS: Hodgson *et al.* 2004, Abbott & Huisman 2004, Vroom *et al.* 2006.

Caulerpa elongata Weber-van Bosse

Lisianski: Hodgson *et al.* 2004, Abbott & Huisman 2004.

Caulerpa microphysa (Weber-van Bosse) Feldmann

Midway: Hodgson *et al.* 2004, Abbott & Huisman 2004.

Caulerpa racemosa (Forsskål) J. Agardh

Kure: Abbott 1989, Walsh *et al.* 2002. Midway: Abbott 1989, Hodgson *et al.* 2004. P&H: Abbott 1989, Abbott & Huisman 2004. Lisianski: Abbott & Huisman 2004. Laysan: Reinbold 1899, Lemmermann 1905, Tsuda 1965, Taylor 1977, Hodgson *et al.* 2004. FFS: Hodgson *et al.* 2004 includes La Perouse, Vroom *et al.* 2006. Necker: Tsuda 1966, Taylor 1977, Abbott 1989, Hodgson *et al.* 2004, Schopmeyer *et al.* 2011. Nihoa: Abbott 1989.

Caulerpa serrulata (Forsskål) J. Agardh

Kure: Hodgson *et al.* 2004. Midway: Abbott 1989, Hodgson *et al.* 2004, Abbott & Huisman 2004. P&H: Howe 1934, Hodgson *et al.* 2004, Abbott & Huisman 2004, Page-Albins *et al.* 2012. Microdictyon umbilicatum (Volley) Zanardini [= *Microdictyon japonicum* Setchell]

Kure: Abbott 1989. Midway: Abbott 1989, Abbott & Huisman 2004. P&H: Abbott 1989. Lisianski: Abbott 1989, Abbott & Huisman 2004. Laysan: Abbott 1989. FFS: Vroom *et al.* 2006. Except for Abbott & Huisman (2004) and Vroom *et al.* (2006), all cited as *Microdictyon japonicum*.

Note. Abbott & Huisman (2004) considered *M. japonicum* as a synonym of *M. umbilicatum*, whereas Leliaert *et al.* (2007) recognized *Microdictyon japonicum* as an accepted species. Further studies must be done on Hawaiian species to conclude which of the species are present in Hawaii's waters.

Neomeris annulata Dickie

Kure: Walsh *et al.* 2002. Lisianski: Abbott 1989, Abbott & Huisman 2004. Nihoa: Abbott 1989.

Neomeris vanbosseae M. Howe

Kure: Walsh *et al.* 2002 as *Ventricaria ventricosa*. P&H: Abbott 1989. Necker: Schopmeyer *et al.* 2011.

Excluded Species

Ceramium subverticillatum (Grunow) Weber-ban Bosse [= *Ceramium kuetzingianum* Grunow]

Laysan: Reinbold 1899 and Lemmermann 1905 as *C. kuetzingianum* Grunow.

Note. Abbott (1999) did not recognize this species as a component of the Hawaii marine flora.

Chlorodesmis hildebrandtii A. Gepp & E. Gepp

Lisianski: Tsuda 1966. Laysan: Tsuda 1965.

Note. The Lisianski specimen (Tsuda 1966) was re-examined, however, no algal siphon representing *Chlorodesmis* was observed on the 1 cm diameter piece of limestone substratum. The Laysan collection (Tsuda 1965) consisted only of *Bryopsis pennata*. This finding adds support to Ducker (1967) that *Chlorodesmis hildebrandtii* does not occur in the Pacific.

Laurencia obtusa (Hudson) J.V. Lamouroux

Kure: Walsh *et al.* 2002. Midway: Buggeln 1965. Laysan: Reinbold 1899, Lemmermann 1905, Tsuda 1965. Gardner: Abbott 1989, Vroom & Timmers 2009.

Note. McDermid (1988) and Abbott (1999: 395) did not recognize *Laurencia obtusa* as part of the Hawaiian marine flora. Likewise, *Laurencia corymbosa* J. Agardh and *Laurencia pygmaea* Weber-van Bosse credited to Laysan (Tsuda 1965) were not considered as components of the Hawaiian marine flora.

Discussion

This bibliographic catalogue of marine benthic algae consists of 335 species in 148 genera and includes blue-green algae (13 genera, 18 species), red algae (89 genera, 198 species), brown algae (20 genera, 45 species) and green algae (26 genera, 74 species). Fourteen species, i.e., 3 blue-green algae, 9 red algae and 2 brown algae, which were collected within the PMNM, were described as new species (Types) and remain as currently recognized species.

Table 1 presents the number of species, thus far, recorded from each of the 10 islands, atolls or shoals in the PMNM. The highest number of algal species were reported from French Frigate Shoals (173 species), Laysan Island (131 species) and Midway Atoll (123 species), and the lowest numbers were reported from the southeasternmost island of Nihoa (33 species) and Lisianski Island (52 species). It is not practical at this time to compare the algae flora from the different islands, atolls or shoals because additional collections still await examination. The present listing will, however, simplify the reporting of new islands records.

TABLE 1. Number of algal species reported from each island, atoll or shoal, and total number of algal genera and species in the Papahānaumokuākea Marine National Monument.

NWHI	Cyanobacteria	Rhodophyta	Ochrophyta	Chlorophyta	Total
Kure Atoll	2	53	14	21	90
Midway Atoll	1	63	28	31	123
Pearl & Hermes Atoll	1	40	13	20	74
Lisianski Island (includes Neva Shoals)	0	31	3	18	52
Laysan Island	15	66	23	27	131
Maro Reef	0	42	18	19	79
Gardner Pinnacles	0	53	11	11	75
French Frigate Shoals (includes La Pérouse Pinnacle)	1	114	19	39	173
Necker Island	1	60	26	31	118
Nihoa Island	0	16	7	10	33
Total Genera	13	89	20	26	148
Total Species	18	198	45	74	335

Acknowledgements

The algal compilation was partially supported by National Science Foundation, Biological Research Collections Pacific Basin Grant DBI-1057453 to the Bishop Museum (Shelley A. James, Principal Investigator). My appreciation to Randall Kosaki, Deputy Superintendent, Research and Field Operations, NOAA-PMNM for constructive comments on the introductory section and for providing me with the NOAA map, and to Alison R. Sherwood, University of Hawaii Department of Botany, and Peter S. Vroom, Ocean Associates contracted to NOAA-CRED, for calling my attention to references missed in an earlier draft. My sincere appreciation to Michael J. Wynne for his detailed review and constructive comments of any earlier draft. This is Contribution No. 2014-010 of the Hawaii Biological Survey, Bishop Museum, Honolulu.
