Larridon, I., Goetghebeur, P. & Roalson, E.H. (2019) New combinations and a new name for including *Nemum* species in *Bulbostylis* (Abildgaardieae: Cyperaceae). *Phytotaxa* 418 (1): 112–114.

The recent publication of the name *Bulbostylis brunneoacuminata* Larridon & Roalson (*Phytotaxa* 418(1): 113, 2019) omitted a full and direct reference to the replaced synonym, therefore rendering the publication not valid per Article 41.5 of the ICN (2018). To rectify this situation, the name is validly published here with the omitted information:

Bulbostylis brunneoacuminata Larridon & Roalson, *nom. nov.*

Basionym: *Scirpus angolensis* Clarke var. *megastachyum* Cherm. (*Arch. Bot. Mém.* 4(7): 25, 1931).

Type: CENTRAL AFRICAN REPUBLIC. Yonguya, 16 November 1927, *Tisserant 2360* (lectotype, designated by Raynal (1973: 150): P 00586778!; isolectotypes: BR 0000009861145!, IFAN).

Homotypic synonym: *Nemum megastachyum* (Cherm.) Raynal (1973: 150).—*Bulbostylis megastachya* (Chermezon) Larridon & Roalson, *nom. illeg. non* Clarke (1894: 614).

Etymology: from *brunneus* (brown) and *acuminatus* (acuminate) referring to the reddish-brown and acuminate glumes, and indicating the close relationship with *Bulbostylis atracuminata* (Larridon, Reynders & Goetghebeur) Larridon & Roalson.

The situation arose due to the fact that two references were missing from the References of the original published manuscript:

Chermezon, H. (1931) Les Cypéracées du Haut-Oubangui. *Archives de Botanique, Mémoires* 4 (7): 1–56.

Raynal, J. (1973) Notes Cypérologiques: Contribution à la classification de la sous-famille des Cyperoidae. *Adansonia* Ser. 2, 13: 145–171.
