WEN-ZHUAN HUANG, TIAN-XIONG ZHENG, YU-HUAN WU & MENG-JIE YU (2024) *Dicranum nepalense* (Dicranaceae, Dicranales), a new species with fragile leaves from Nepal Himalayas. *Phytotaxa* 666 (1): 51–58.

We published a new species *Dicranum nepalense* W.Z.Huang, T.X.Zheng & Y.Huan Wu in Huang *et al.* (2024: 52). Regrettably, we overlooked the existence of *D. nepalense* (Bridel 1827: 821) Müll.Hal. (1848: 384) within the same genus and, thereby creating an illegitimate later homonym (Art. 53.1; Turland *et al.* 2018). This is corrected here by establishing an adequate replacement name as following.

Taxonomic treatment

Dicranum annapurnaense W.Z.Huang, T.X.Zheng & Y.Huan Wu, **nom. nov. pro** *Dicranum nepalense* W.Z.Huang, T.X.Zheng & Y.Huan Wu, *Phytotaxa* 666(1): 52. 2024 (Huang *et al.* 2024), **nom. illeg.** (ICN Art. 53.1; **hom. illeg.** [non *Dicranum nepalense* (Brid.) Müll.Hal., Syn. Musc. Frond. 1: 384. 1848 (Müller 1848)]).

Type:—NEPAL. The Annapurna Range, Upperkharka below Lamjung Himal., ca. 3600 m alt., on *Rhododendron*, 1 May 1976, S. Kunisawa *et al. s.n.* [holotype: NICH 349870, isotype: BJTC, HTC]. Paratypes see Huang *et al.* (2024).

Etymology. The epithet “*annapurnaense*” is named after Mt. Annapurna, where the holotype was found.

Description, illustration and taxonomic notes. Refer to Huang *et al.* (2024).

Acknowledgments

We thank Dr. John J. Atwood (M) for pointing out the error.
