Hughes, M. & Takeuchi, W. (2015) A new section (*Begonia* sect. *Oligandrae* sect. nov.) and a new species (*Begonia pentandra* sp. nov.) in Begoniaceae from New Guinea. *Phytotaxa*, 197 (1): 37–44.

Please note the diagnosis on page 39:

Two other species in *Begonia* sect. *Oligandrae* with entire leaves: *B. sandsiana* and *B. brassii*. *Begonia pentandra* differs from *B. brassii* in having unbranched, capitate styles, and differs from *B. sandsiana* in being a much smaller plant with hairy stems and leaves. The ciliate bracts of *B. pentandra* distinguishes it from all other species in sect. *Oligandrae*.

Should read:

There are two other species in *Begonia* sect. *Oligandrae* with entire leaves: *B. sandsiana* and *B. brassii*. *Begonia pentandra* differs from *B. brassii* in having unbranched, capitate styles, and differs from *B. sandsiana* in being a much smaller plant with hairy stems and leaves. The ciliate bracts of *B. pentandra* distinguishes it from all other species in sect. *Oligandrae*.
